

# DERMATOLOGY AND OCULOPLASTIC CONSULTANTS

DR. PAUL BRANNAN

**WHAT ARE THE MOST POPULAR PROCEDURES THAT YOU OFFER?** We offer patients a variety of comprehensive medical, cosmetic, and surgical care; but eyelid surgery (blepharoplasty) is one of the most common procedures I perform at our facility. As we age, excess eyelid skin develops, which can cause the upper and lower eyelids to stretch or droop. In the upper eyelid, this excess skin stretches over the eyelashes and limits the field of vision. It can also cause a feeling of heaviness in the eyelid and may produce an uneven appearance of the eyes. For some people, puffiness and extra skin in the lower eyelid can lead to “bags under the eyes” which gives the appearance of tiredness. Fortunately, blepharoplasty can reduce the extra tissue of the upper and lower eyelids with minimal downtime. Patients maintain a natural look, while creating a more youthful looking face that appears refreshed and less tired.

In addition to blepharoplasty, our facility offers patients a variety of cosmetic procedures such as dermal fillers, brow lifts, and chemical peels. We excel in all aspects of skin care and can help reduce wrinkles, remove fine lines and brighten skin tone. Your customized regimen is created by an assessment of your concerns, an in-depth skin analysis, and our expert medical advice.

## DOCs Dermatology & Oculoplastic Consultants Institute for Advanced Medicine

5880 Rand Blvd. Suite 201, Sarasota, FL 34238

"Fortunately, blepharoplasty can reduce the extra tissue of the upper and lower eyelids with minimal downtime. Patients maintain a natural look, while creating a more youthful looking face that appears refreshed and less tired."

The physicians at Dermatology and Oculoplastic Consultants (DOCs) blend the art and science of medicine to deliver superior, customized care to patients of ages throughout the Sarasota region. Located inside the Sarasota Memorial Hospital's Institute for Advanced Medicine, DOCs provides patients with high-caliber treatments ranging from medical and cosmetic dermatology to eyelid, brow and tear duct surgery. Other services include skin cancer surgery, MOHS reconstruction and orbital surgery. DOCs also offers patients a variety of skin renewal services such as Radiesse, Botox and Pulsed Light PhotoRejuvenation. Indeed, DOCs is a one-stop-shop for the skin and eyes as well as cutting-edge cosmetic procedures.

Dr. Paul Brannan received his Medical Doctorate degree from Wake Forest University School of Medicine and is a board certified ophthalmologist. He is a member of the American Society Ophthalmic Plastic and Reconstructive Surgery (ASOPRS) and previously served as Director of the Ophthalmology Residents' Clinic. He specializes in conditions affecting the eyelids and eyebrows, minimally invasive facial rejuvenation, and facial skin cancer reconstruction.

Dermatology specialist, Dr. Heidi Anderson, received a Molecular Biology degree from Princeton University followed by a Medical Doctorate from Wake Forest University School of Medicine. She is board certified in both Dermatology and Pediatrics and has worked in both public and private practice for six years.
